Intelligent Access Management

Smart has a Color.

Introducing a brilliant new innovation in access management: **bright blue**™ from Schlage. It's a web-based access control system that gives you the freedom to access, manage and control your facility's points of entry from anywhere. It's powerful. It's easy to use. And it gives you complete control over who goes where and when. This blue box is very bright, indeed.

With **bright blue**, there's no need to install expensive software or use a dedicated PC — everything you need is inside the box, just plug it into your existing network and power source. You can safely and securely manage up to 32 doors and 5000 cardholders from any computer with internet access, so it's perfect for most small- to medium-sized applications. And, with integrated video you'll enjoy enhanced security and greater peace of mind.

Every aspect of the system has been designed to make it intelligent, cost-effective and easy to use. **bright blue** is so smart, it's a simple choice.

Brilliant Security. Easily Accessed.

User Friendly.

bright blue's intuitive interface is perfect for users who have minimal experience with electronic access control systems. With a click of the mouse, anyone can add doors and users or manage access points.

Accessible.

bright blue can be managed from any computer running a standard web browser. This allows users to access, manage and control the system from anywhere.

Easy to Install.

Because there's no software to install and fewer wires to run, installation time is greatly reduced. Simply connect the panel to your network and a power source, and you're set.

Simple Configuration.

Using the plug-and-play approach, **bright blue** is designed to make the configuration process quick and easy.

Cost Effective.

Because **bright blue** is web-based, there's no need to invest in a separate PC or dedicated security network to run the security system. It can be done from any computer with access to the internet. And when using Schlage's hardwired and wireless electronic locks, including the AD-Series, the purchase of additional reader interface hardware is eliminated.

More Brilliant Features and Benefits:

- Supports up to 32 doors and 5000 cardholders
- Linux operating system
- Supports Internet Explorer 7.0 and FireFox
- Compatible with DHCP or Static IP addressing
- Supports magnetic stripe and proximity technologies
- Battery backup
- Native communication to Schlage devices
- Video integration
